DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7-31-07 has been entered.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Rabena on 8-14-07.

The application has been amended as follows:

1. Line 1 of claim 9, after "claim", add -- 4 --. The instant examiner's amendment is to make claim 9 depend upon independent claim 4, in order to correct for the inadvertently omitted dependency of claim 9.

Allowable Subject Matter

Art Unit: 2873

Claims 1-4 and 6-9 allowed.

The following is an examiner's statement of reasons for allowance: applicant's arguments on p. 5-6 are deemed persuasive and furthermore, the prior art taken alone or in combination fails to anticipate or fairly suggest the limitations of the claims, in such a manner that a rejection under 35 USC 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims 1, 2 and 4.

Specifically regarding claims 1, 2 and 4, Nomura et al. (7054253) teaches the state of the art of a spatial light modulator.

But, Nomura et al. fails to explicitly teach a combination of all the claimed features including said plurality of light modulation elements are configured to perform light modulation in accordance with two-dimensional data corresponding to a recording data signal and said plurality of light modulation elements are arranged such that there are at least two Fourier frequency components corresponding to distances of the light modulation elements in an arbitrary direction in said one plane, an arbitrary direction in said light modulation region or in a radial direction of said light modulation region, as claimed.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
